

SYNCORO IPX 2027: An Annual Research Commercialisation Event

From Research to Relevance. From Knowledge to Application. From Innovation to Impact.

India's innovation story has reached an important inflection point. We are no longer a country waiting for ideas. We are producing them at scale. India ranked 38th in the Global Innovation Index 2025 – up from 52nd rank in 2019 - strengthening its leadership in Central and Southern Asia. India's patent filings reached a historic high of 1,43,729 applications in the 2025-26 fiscal year, representing a 30.2% surge from the previous year. And yet, fewer than 2% of India's patents are ever commercialised. This is the paradox that defines Indian innovation today: we are world-class at creating knowledge and world-poor at converting it. Too much research remains locked in papers. Too many patents remain unused. Too many prototypes never meet industry. Too many innovators struggle to find the right partners, capital, mentors, markets and policy support. So the question is no longer whether India can innovate. The question is whether India can convert its research into relevance, adoption and impact. India does not have an innovation shortage. India has a research commercialisation gap. That is the need SYNCORO IPX seeks to address.

About SYNCORO IPX 2027

SYNCORO IPX is Syncoro's flagship annual event dedicated to research commercialisation - designed to bring together India's key innovation stakeholders on one platform to accelerate the journey of research from labs, campuses and prototypes to real-world adoption. At a time when India is producing more patents, more startups, more research and more scientific talent than ever before, the next big opportunity lies in building stronger bridges between knowledge creation and practical application.

SYNCORO IPX will bring together innovators, researchers, universities, corporates, MSMEs, startup founders, investors, service providers, NGOs, ecosystem organisations and government / policy makers to discuss, showcase, collaborate and create pathways for research-led innovation to move closer to industry, society and global markets.

SYNCORO IPX is not just another conference. It is an annual ecosystem event designed around one mission: To help research move towards relevance, adoption, partnerships, ventures and impact.

Why SYNCORO IPX Matters

Research commercialisation does not happen in isolation. A researcher may have knowledge, but not market access. A corporate may have real problems, but no visibility into relevant research. An investor may have capital, but not enough credible science-led opportunities. A startup founder may have execution energy, but not access to protected technologies. A service provider may have expertise, but no structured way to engage with researchers. An NGO may need scalable solutions, but not know where to find them. Government may have policy intent, but needs stronger ground-level ecosystem activation. Everyone exists. But they do not meet often enough with a shared commercialisation agenda. SYNCORO IPX is designed to create that annual meeting point.

Proposed Event Format

SYNCORO IPX 2027 will be structured as a curated annual event with pre-event preparation, two-day engagement and post-event follow-up.

- **Day 1: Discovery & Showcase**
Keynotes, research showcase, university pavilion, commercialisation clinics, policy conversations and ecosystem sessions. The ecosystem sees what exists.
- **Day 2: Collaboration & Commercialisation Pathways**
Corporate problem forums, investor interactions, licensing clinics, founder-researcher conversations, challenge finale, curated meetings and potential MoU / collaboration announcements. The ecosystem explores what can move forward.

The event will include:

- **Research Showcase:** Curated research, patents, prototypes, student innovations, faculty-led innovations, university technologies and startup-led solutions.
- **Research Commercialisation Challenge:** A dedicated platform for researchers and innovators who want their work to move beyond publication, recognition and patent filing.
- **Corporate Problem Forum:** Corporates and MSMEs present real problem statements; researchers, startups and service providers respond with possible solutions.
- **Commercialisation Clinics:** Focused sessions on IP protection, licensing, valuation, productisation, regulatory readiness, GTM, fundraising and grant readiness.
- **Investor & Founder Interactions:** Structured conversations around IP-led startups, research-backed ventures, university spin-outs and deep-tech opportunities.
- **Policy & Impact Roundtables:** Dialogue between government, academia, industry, NGOs and ecosystem leaders on how to strengthen India's research commercialisation capacity.

Key Stakeholders & Benefits

- **Researchers & Innovators:** Visibility, industry feedback, commercial mentoring, IP guidance, potential pilots, startup pathways and access to investors, corporates and service providers.
- **Universities & Research Institutions:** A platform to showcase research, activate commercialisation culture, strengthen industry linkages, support faculty and student innovators, and build credibility as knowledge-to-impact institutions.
- **Corporates & MSMEs:** Access to emerging research, technology scouting, startup connects, university partnerships and problem-solution matching for business, operational, sustainability and innovation challenges.
- **Startup Founders:** Access to research-backed ideas, potential co-founder or researcher relationships, IP-led venture opportunities, investor visibility and commercialisation support.
- **Investors & Family Offices:** Early visibility into research-led ventures, IP-backed opportunities, university spin-outs and founder-researcher combinations that may become the next generation of deep-tech startups.
- **Service Providers:** A focused platform for IP attorneys, valuation experts, design firms, product developers, branding teams, GTM experts, grant advisors, legal consultants and regulatory specialists to support commercialisation journeys.
- **NGOs & Impact Organisations:** Access to innovations that can solve real problems in healthcare, education, livelihood, climate, agriculture, and community development.
- **Government & Policy Makers:** A ground-level view of policy gaps, university-industry collaboration needs and regional innovation opportunities.

Event Participation: 300+ delegates | 100+ technologies showcased | 75+ startups
50+ universities | 25+ investors | 10+ corporates

Event Date & Venue: April 24-25, 2027 | Surat

The Post-SYNCORO IPX Momentum

SYNCORO IPX is designed to continue beyond the event. Post-event, Syncoro will enable curated follow-up conversations, introductions, pilot discussions, service-provider connects and university-industry linkages, while capturing key insights through the annual SYNCORO IPX Impact Report. The objective is to ensure IPX does not end as a two-day gathering, but evolves into a recurring platform that builds sustained momentum for research commercialisation.

The Vision

SYNCORO IPX is not designed as a one-time event. It is envisioned as an annual intellectual property and research commercialisation movement from India with a global outlook. At its core, SYNCORO IPX is built around a larger question: How can research move faster from laboratories, universities and innovation ecosystems into industry, society and global markets?

The world is entering an era where nations will not compete only on capital, manufacturing capacity or consumer markets. They will compete on the strength of their knowledge systems - how effectively they create, protect, translate and deploy new ideas. India has already entered the age of innovation creation. More patents are being filed. More research is being produced. More startups are being built. More young innovators are challenging conventional boundaries. But the next leap will demand something deeper. *India must move from innovation creation to innovation application. From research output to real-world outcomes. From knowledge generation to global relevance.*

SYNCORO IPX aims to become that annual convergence point where researchers, innovators, universities, corporates, startup founders, investors, service providers, impact organisations and policy makers come together with one shared purpose - to accelerate the journey of research towards adoption, scale and meaningful impact. The ambition is not merely to create another conference around innovation. The ambition is to build a recurring platform that can help India strengthen its research commercialisation culture, connect its fragmented ecosystem, and eventually position itself as a serious global contributor to science-led entrepreneurship, industry innovation and future-ready solutions.

SYNCORO IPX begins in India. But the vision is global. To make Indian research more visible. To make Indian innovation more connected. To make Indian knowledge more application-oriented. And to make India not just a creator of ideas, but a builder of solutions for the world. That is the purpose of SYNCORO IPX. That is the annual movement Syncoro wants to build.
